

Heard of Mooir Vannin offshore wind farm? Heard of the RISKS?

➤ £2 billion in revenue ➤ **NOT GUARANTEED**

➤ Renewable energy ➤ **NOT GUARANTEED**

➤ Cheaper electricity ➤ **NOT GUARANTEED**

➤ Decommissioning plan ➤ **NOT GUARANTEED**

➤ Job opportunities ➤ **FEWER THAN PROMISED**

➤ Protections for Manx wildlife ➤ **UNDERSTATED**

➤ **So many claims.** ➤ **So few benefits.**

So many RISKS.

Don't get us wrong, we are **FOR** renewable energy
but we are **AGAINST** a bad deal and Mooir Vannin is
a bad deal for the Isle of Man.

NOT**4**IOM.COM

Wait, what do you mean there are no guarantees?

We mean exactly that.

All we see are lots of RISKS.

THE REVENUE RISKS?

Treasury's own modelling suggests reduced revenues of £0.7bn to £1.9bn in real terms over a 35-year lifespan that - by the way - no offshore wind farm has ever actually achieved. The figures are built largely on Ørsted's own statements, the Treasury Minister has not endorsed them and no one has independently verified them. Not a penny is secured, ringfenced or allocated.

TOURISM LOSS RISKS?

Moor Vannin risks the Manx visitor economy – an industry worth more each year than the Project could pay. Treasury states that the Manx visitor economy delivers £43m per year to the exchequer – considerably more than the £34m in real terms revenue per year in the Treasury's central case that Moor Vannin would deliver – yet no department has quantified, or independently tested, how much of that the Project risks.

ENERGY SUPPLY?

No secured supply of power to the Island. The Island Link is uncertain even on Ørsted's evidence and Manx Utilities has confirmed that the Power Purchase Agreement, suggested as capable of offering the Island electricity around 10-15% cheaper, is not in evidence and should not be afforded material weight in the planning balance.

CHEAP ELECTRICITY?

No guarantee of cheaper electricity. Manx Utilities has also given no guarantee that the project will deliver cheaper electricity for Manx consumers and describes any reduction in customer bills as no more than a future possibility.

JOBS - WHAT JOBS?

Ørsted now concedes that it will only create 5–10 Isle of Man jobs per phase – not 30 jobs as initially stated, and that most of the 2,000 construction jobs will be filled from elsewhere.

DECOMMISSIONING RISK?

Probably one of the biggest risks of all to future generations. The estimated up to £740 million cost (IOM Treasury figures) to get rid of the project in 35 years? No plan, no secured funds, just more promises.

MORE OFFSHORE WIND FARMS?

Ørsted's claim that the site of Moor Vannin is the "only" viable option is not supported by the evidence. Former Treasury Minister, Dr Alex Allinson, submitted evidence stating the Island has "a technical potential to deliver nine gigawatts of offshore energy" indicating that other sites may already be being considered for future Offshore Wind Projects.

BIRD DEATH RISKS?

Inadequate baseline ecological assessments. Manx Wildlife Trust has stated that "several of the baseline ecological assessments are inadequate" and that "Manx ecological impacts have to date been understated", meaning that for some species, the modelled annual deaths are "actually significantly greater than the entire Manx over-wintering population".

A COMPROMISE?

The "Thought Experiment" about a smaller wind farm must be rejected. It is a materially different scheme. Ørsted has not submitted a formal change request – the deadline for which has already passed and there has been no public consultation on this alternative smaller wind farm. People haven't had their say on it.

What can I do? **Three things...**

1

Join 11,000 Manx residents and sign the petition to **SAY NO MOOIR VANNIN** that will go to Tynwald.

Sign online at **NOT4IOM.COM**

Scan the QR code

Read the information overleaf,
tear off this page, complete
your details below and post it to:

NOT4IOM, Room 6, 35 New Road, Laxey, IM4 7BG

Address:

Postcode: Signature:

First Name: Last Name: Age:

Address:

Postcode: Signature:

The above is true to the best of my/our knowledge.

☐

I / we oppose
Mooir Vannin wind farm.

☐

My / our name(s) may be included
in a petition to Tynwald.

There is only one NOT4IOM signature petition.

If you are one of the 11,000 residents to have already signed the petition,
thank you! You do not need to sign again – we have your signature.

Data Protection - NOT4IOM uses Cognito Forms to securely collect and manage personal information in compliance with GDPR. Your information will only be added to the e-petition to Tynwald. NOT4IOM is a registered Data Controller & Processor with the IOM Information Commissioner. Read more at <https://not4iom.com>.

2

Speak to your MHK. Tell them your concerns.

Tell them you want your views represented.

Tell them you SAY NO MOOIR VANNIN.

3

Spread the word and ask others if they have signed the petition.

NOT⁴IOM Petition

Say **NO** to the **Moor Vannin** Offshore Wind Farm **THIS IS OUR ISLAND. OUR HOME. OUR HERITAGE.**

The Isle of Man is defined by its natural horizons, its quiet seas, its dark skies, and its unique wildlife.

Now, 87 industrial turbines, each up to 350m tall, are proposed just 6 nautical miles from our shore, covering 81 square miles of our waters. Turbines similar in height to the Eiffel Tower (330m) and the London 'Shard' (309m) will dominate our views and change our seascapes forever.

We are not against renewable energy, and we are not against progress.

**But we are against losing what makes the Isle of Man unique—
for a project that gives us almost nothing in return.**

WHY WE MUST STAND TOGETHER

The initial statutory consultation period was a failure because the public is only now beginning to understand the reality of this project!

- **Unlikely to Provide Energy Security:**

Contrary to copious developer marketing, this wind farm is unlikely to provide energy **security** for the Isle of Man or provide **cheaper** electricity or help us meet our 2030 clean energy commitments. The project is designed to export energy to the UK grid and no supply to the Island is secured.

- **Is OUR island bearing the burden for the UK's energy needs and their net zero targets?**

- **Uncertain Financial Benefit:** The seabed rental has been minimal at circa £10,000 per year. It may be more in the future but there is no current evidence for that. It may be many years before the IOM sees any **meaningful** income, if any (due to delayed 'profit', capital cost offsetting & divestment for example).

- **Decommissioning Risk:** If the operator of Moor Vannin is not around in 35 years, we may face a potential bill of up to £740 million according to the IOM Treasury to remove the infrastructure.

- **Agreement for Lease – Undisclosed:**

It is impossible to assess whether financial benefits outweigh the harms because key financial documents, such as the 'Agreement for Lease', are undisclosed.

- **Environmental Damage:** We risk permanent **damage** to our landscapes, seascapes, dark skies and biosphere status—the foundation of our tourism industry. We face long-term **disruption** to marine life and fishing grounds from years of construction and operation.

- **Industrialised Waters & Future Expansion:** This project risks **permanent loss of sea space** for navigation and ferry routes. Documentation for the UK connection suggests oversized infrastructure and the potential for future "farms". In July 2026, Dr Allinson confirmed government policy plans were to develop further offshore wind generation. With no marine spatial plan and an opaque 'Agreement for Lease', we risk ceding our waters for decades to **uncontrolled, unconsulted expansion** – unable to use our own sea for OUR OWN energy projects.
